USE CASE

Modernize the WAN to support business needs with high network availability, high data throughput, and low management overhead across a global footprint of branch and distant locations

REQUIREMENTS

- Adopt an advanced, unified SD-WAN optimisation platform
- Obtain intelligent tools for monitoring, adapting and responding to WAN performance
- Eliminate application outages caused by link failures

SOLUTIONS

Aruba EdgeConnect SD-WAN edge platform for a self-driving wide area network; Boost for accelerating applications and maximizing available bandwidth

OUTCOMES

- Achieves improved network performance and availability while reducing repetitive transmission of duplicate data, saving on WAN connectivity costs
- Optimizes the performance of critical applications and significantly improved user experiences

"We were facing frequent outages due to issues such as link flapping, unsatisfactory application performance, and the overall network insufficiency. With Aruba's advanced SD-WAN solution, those problems are solved."
